

Technical assistant/dry-dock technical assistant m/f

Job and assignments

The Technical Assistant is essential in the production chain. He/she prepares repair or building operations, analyses the work to be done and splits it into sub-tasks, assesses timelines and defines sequences. He/she schedules operations ensuring that the required means and tools are available, while seeing to hygiene and safety compliance. He/she writes preparatory files and works reports. Placing orders and purchasing may be part of the job.

Work environment

He/she performs their duty at shipyards, with RD/consulting, parts manufacturers or multi-trade organizations, liaising with purchase, R&D and production departments. He/she must factor in other trades. He/she liaises with sub-contractors and suppliers.

Inter-personal and expert skills

- You have technical skills in the relevant field (pipework, electricity, mechanics...)
- You are proficient in CAPM, CAD
- You are methodical and organized and you like team-work
- Your mind is set on safety
